PROFILE

Finance and technology professional with an engineering foundation, quantitative research experience, and hands-on exposure across trading operations, equity research, wealth management, and venture-backed startup building. Fluent in Python-based modelling, derivatives analysis, and agentic AI workflows. I hold a 485 visa and am work-authorised until March 2028.

TECHNICAL SKILLS

Programming	Python (pandas, NumPy, SciPy, scikit-learn, statsmodels), SQL, R, MATLAB
Quantitative	Back-testing, time-series analysis, VaR, PnL attribution, Greeks, factor research
ML / AI	LSTM, Gradient Boosting, Reinforcement Learning, QAOA, LangChain, agentic AI
Finance Tools	Bloomberg, FactSet, S&P Capital IQ, Morningstar, MT4/MT5, Centroid Bridge
Platforms	AWS, Azure, Git, Tableau, Power BI, Jira, Postman, Excel (advanced)

EXPERIENCE

Trading Operations Specialist, Afterprime

Jan 2026 to Present

- Manage live MT4/MT5 trade flow and Centroid Bridge configurations across multiple liquidity providers, ensuring sub-millisecond execution integrity and minimising slippage events across 1,000+ daily transactions.
- Built Python automation scripts to reconcile trade, margin, and cash settlement data; reduced manual break-investigation time by over 60% through real-time discrepancy flagging.
- Developed an AI agent using LangChain to automate client onboarding checks and internal SOP compliance, cutting documentation review cycle time and eliminating a recurring manual bottleneck.
- Authored operational SOPs and runbooks for bridge monitoring, position management, and incident escalation across the Centroid infrastructure, improving team response consistency.
- Coordinated live infrastructure alert management across Slack operational channels, reducing mean time to resolution on bridge incidents.

AI Consulting Analyst, Prepped Talent

Apr 2026 to Present

- Deliver AI strategy and implementation advice to clients integrating LLM-based workflows into finance and operations functions, with a focus on measurable efficiency gains.
- Assess client data infrastructure and automation readiness; produce structured deployment recommendations that have directly informed product roadmap decisions for two client engagements.

Independent Quantitative Trader, Self-Directed Research

Jun 2024 to Present

- Designed and back-tested derivatives trading strategies across equity and FX markets using Python and FactSet data, achieving an 18% improvement in Sharpe ratio relative to baseline momentum benchmarks.
- Implemented VaR and PnL attribution models to monitor daily position risk, enabling systematic identification of regime shifts before significant drawdown events.
- Analysed transaction and microstructure data to isolate liquidity and volatility patterns, contributing to a ruleset that improved signal-to-noise ratio in short-term entry timing.

Founder, Oasis (Startmate Student Accelerator)

Dec 2024 to Present

- Founded Oasis, a hyperlocal delivery platform accepted into the Startmate Student Accelerator; built MVP including route optimisation algorithm, UI/UX, and product-channel fit validation with real customer cohorts.
- Drove early commercial traction through direct customer development, turning qualitative discovery into product decisions that reduced delivery time estimates by 30% in prototype testing.
- Produced investor materials and presented commercial strategy to accelerator mentors and institutional stakeholders, securing continued programme support.

Wealth Management Intern, Atlassio Capital Partners

Jun 2025 to Present

- Supported relationship managers in preparing portfolio assessments for HNW and UHNW clients; contributed directly to client-facing review materials across accounts with combined AUM in the tens of millions.
- Coordinated compliance documentation and APRA/ASIC reporting obligations, helping the advisory team meet all regulatory deadlines with zero missed submissions during tenure.

Equity Research Analyst, Macqro Capital

Mar 2024 to Apr 2024

- Produced 40+ ASX equity research reports across mining and resource sectors; back-tested macro models and identified investment opportunities that were referenced by the CEO in client portfolio decisions.
- Monitored economic indicators and sector developments to deliver actionable insights to over 15 institutional and retail clients, contributing to portfolio repositioning decisions during a period of commodity volatility.

Research Assistant, UTS Business School

Nov 2023 to Aug 2025

- Built Python and R data pipelines to assemble and structure insurance and crime datasets across 29 Indian states over a decade; output used in two peer-reviewed academic papers.

- Constructed a 500-firm database for Canadian mining research, enabling econometric analysis of exploration cost elasticity and development incentive effects at scale.

EDUCATION

Master of Finance, University of Technology Sydney (UTS) 2023 to 2025

- GPA 6.4/7.0 | WAM 81.69 | Coursework: Financial Modelling, Investment Management, Corporate Finance, Derivatives, Risk Management

BTech, Electronics and Instrumentation Engineering, Heritage Institute of Technology, Kolkata

2018 to 2022

- GPA 8.22/10 | Coursework: Linear Algebra, Signal Processing, Digital Image Processing, Mechatronics

CERTIFICATIONS

- CAIA Level II Candidate, Chartered Alternative Investment Analyst Association (Level I cleared in approximately 20 days; scholarship recipient)
- CFA Level I Candidate, CFA Institute

SELECTED PROJECTS

AI-Driven Derivatives Trading Platform

- Designed a multi-strategy system combining LSTM networks, Reinforcement Learning, and Quantum-Approximate Optimisation (QAOA); forward revenue model projected \$4.8M across asset classes with a simulated Sharpe above 1.6.

Stock Price and Volatility Prediction Model

- Applied RBFN, OLS, and random-walk benchmarks across 25+ engineered features; RBFN configuration outperformed OLS baseline by 14% on directional accuracy over a 3-month out-of-sample window.

Open Banking API Integration (CommBank)

- Built a Python and Postman integration against the CommBank Open Banking API to automate transaction categorisation and cash flow analysis; reduced manual reconciliation steps by 80% in prototype testing.

Multi-Factor Equity Model, Ansell / Westpac / Metcash

- Constructed a regression-based multi-factor model with hypothesis testing to decompose equity returns into systematic exposures; identified a value factor loading that explained 62% of cross-sectional return dispersion in the sample.

Rex Minerals, Mining Project Valuation (over \$1B pipeline)

- Performed DCF, NAV, and comparable company analysis across two mine sites with over \$1B in pipeline revenue; sensitivity analysis on commodity price assumptions stress-tested project economics across 12 scenarios.

CSL Limited, Equity Research (Contrarian Sell Recommendation)

- Led a team to produce a contrarian sell recommendation on CSL using DCF and relative valuation; recommendation proved prescient as the stock underperformed the ASX 200 by 8% in the following quarter.

Chief Risk Officer Simulation, IRRBB and CVA Management

- Modelled VaR, duration, CDS pricing, and IRRBB in an 8-person team simulation under stressed rate scenarios; developed hedging recommendations that reduced simulated portfolio duration risk by 22%.

Ethical AI in Finance, XAI Governance Framework

- Designed an explainability governance framework for ML-based credit decisioning models; mapped regulatory obligations under ASIC guidance and proposed audit trail requirements for model fairness monitoring.
